Docket No. F-7873

Ser. No. 10/612,436

AMENDMENTS TO THE SPECIFICATION:

Please amend the indicated paragraphs and portions of the specification in accordance with the amendments indicated below.

Page 1, after the title, insert:

BACKGROUND

Page 2, before the first full paragraph insert:

SUMMARY

Page 2, second full paragraph:

This objective is accomplished with a hydraulic rotating motor with ~~[[the]]~~ distinguishing features ~~or claim 1~~ including working pressure chambers which are adapted to be acted upon by hydraulic fluid for producing rotational movement, a shaft to which the rotational movement is transferred, a stationary head, electric conductors passing into the head from outside the motor and extending through an interior of the motor to the electric consumer, as well as with a vehicle ~~with the distinguishing features of claim 10~~ with the hydraulic rotating motor for driving a consumer of electricity, especially electromagnets or multifunction heads, for which leads, protected towards the outside, and supplying electricity, are passed within a radial arm into a head of the rotating

motor and, from there, through the interior of the rotating motor up to the consumer. Appropriate further developments of the inventive, hydraulic, rotating, motor are defined in the dependent claims herein.

BRIEF DESCRIPTION OF THE DRAWINGS

Page 5, after the third full paragraph insert:

DETAILED DESCRIPTION

Amend the abstract found on the last page of the specification as filed as indicated below by underlining, strikeouts, or double bracketing.

A hydraulic rotating motor for ~~the driving mechanism of tools, especially~~
~~also~~ for the driving mechanism of electricity consumers, ~~such as~~
~~electromagnets, as well as a vehicle, a machine/a crane with such a rotating~~
~~motor, is described.~~ The rotating motor preferably has revolving working
 pressure chambers ~~[[27]]~~, which are acted upon by hydraulic fluid for
 producing a rotational movement, which is transferred to a driven shaft ~~[[26]]~~.
~~In the case of the rotating motor, electricity~~ Electricity is supplied to ~~[[the]]~~ a

consumer, through a lead ~~19, 20~~, which is passed from the outside into a stationary head ~~[[9]]~~, through ~~[[the]]~~ an interior of the rotating motor to the consumer. In a ~~For the vehicle with the inventive rotating motor, leads~~ supplying electricity are passed protected within a radial arm to ~~[[the]]~~ a head ~~[[9]]~~ of the rotating motor and, from there, through the interior of the rotating motor to the ~~actual~~ consumer of electricity ~~, so that the cables 19, 20 are protected towards the outside until they are passed on to the consumer.~~
